

Team name: Team 14

Team Leader: Samruddhi bhiogade

Team Members: Samruddhi Bhiogade

Selected AI Agent Domain: AI Student study agent

Problem Statement:

- **What is the problem?**

Students often struggle to manage multiple subjects, assignments, deadlines, class notes, and exam preparation. This leads to poor time management, missed deadlines, and ineffective studying.

- **Who experiences this problem?**

- School students
- College and university students
- Students preparing for competitive exam

- **Where does the problem occur?**

The problem occurs in schools, colleges, universities, coaching institutes, and during self study at home where students have to manage large amounts of academic work.

- **What is the current difficulty/pain point?**

Students struggle to manage their syllabus, notes, deadlines, and exam preparation efficiently. An AI student study agent provides personalized study plans, reminders, quizzes, and progress tracking to make learning more organized and effective.

Why did I choose this as my problem statement?

- Why is this problem important?

Students often struggle with managing studies, deadlines, and revisions. It is a very evident AI agent which will help them to work and study efficiently.

- Who will benefit from solving it?

School, college students and students preparing for competitive exams.

- Why is an AI Agent suitable for this problem?

AI can create personalized study plans and adapt them based on student performance.

- What makes your solution useful or different?

It combines planning, reminders, quizzes, and progress tracking in one platform.

- What impact could the solution create?

It improves learning, saves time, reduces stress and boosts academic performance.

Conclusion:

The AI student study agent requires a moderate initial investment, but its scalable design and ability to serve thousands of students make it a cost effective and sustainable educational solution in the long run.

Thank you!
